

GAS PLANT REBUILD & NITROGEN REJECTION UNIT

CLIENT - Ryckman Creek Resources LLC

LOCATION - Evanston, WY

COMPLETED - 2015

DESCRIPTION

Matrix Service provided mechanical and construction services for the gas plant rebuild/nitrogen rejection unit (NRU) project, located in Evanston, WY.

The Ryckman Creek gas storage facility injects pipeline gas into depleted oil reserves during the summer and withdraws it to supplement pipeline distribution during the winter. The original NRU operated for a short time before a fire in the feed exchanger damaged the unit and shut it down. This project restores the NRU to full operation and incorporates some changes to make it more robust.

PRINCIPAL FEATURES

- Mechanical work
- Pipe fabrication and installation
- Installation of 4,000LF of stainless steel pipe
- Commissioning and start-up
